

Fertilizer Application Instructions

Pre-Plant Fertilizer

Pre-Plant Fertilizer is crucial for healthy plants.

It helps germinate the seeds and gives them a healthy start

Mix together:

- 10 cups **gypsum**

(Arid regions use gypsum; climates of 20 inches or more of rain use lime)

- 2 Tbsp Borax (Boron)
- ½ cup Epsom salt (Magnesium sulfate)

When Pre-planting; Mix thoroughly with the soil:

- 2/3 tsp of Pre-Plant fertilizer per square foot
- 1/3 tsp of Garden Magic fertilizer per square foot
 - As a liquid application; 4 Tbsp to 6 gals water will feed 16 squares
- **When Transplanting;** apply the first regular application of the **Garden Magic Fertilizer** 3 days after transplanting and on a weekly basis thereafter.

Garden Magic Fertilizer

7 days after germination, apply 1/3 teaspoon per square foot and every 7 days thereafter.

As a liquid application; 4 Tbsp to 6 gals water will feed 16 squares
